

Overview

The AW-FHS121 fire hose nozzle is a critical device attached to the end hose, designed to control water flow, pressure and spray pattern for effective firefighting.

It ensures optimal water delivery by offering adjustable settings. Constructed from durable materials like brass, nozzle must withstand high pressure and varying flow rates. They are used in structural fires, wildfires, and hazardous material incidents, with fog settings also protecting firefighters from radiant heat.

Key features

- ✓ Adjustable spray patterns
- ✓ Flow and pressure control
- ✓ Durable construction
- ✓ Versatile application
- ✓ Safety functions
- ✓ Low maintenance

Technical parameters

Name	USA-style fire hose nozzle
Effective range	22M
Material	brass
Flow rate	(2.5")510L/min
Operating pressure	13bar
Size	DN40(1.5") Or DN65(2.5")
Outlet size	(1.5")Φ9 or (2.5")Φ16
Weight	1.32Kg
