

FIRE ALARM CONTROL PANEL is a miniature fire protection system that receives wireless devices. Simple human-machine interface and easy operation. A wireless module with long-distance, anti-interference, and strong stability can receive information from each wireless firefighting equipment. Equipped with dual power supply of mains and lithium batteries, automatic switching.

Features

- A wireless module with long-distance, anti-interference, and strong stability can receive information from each wireless firefighting equipment.
- Equipped with dual power supply of mains and lithium batteries, automatic switching.
- A panel can receive up to 20 wireless fire protection device messages and can remotely send alarm messages to the user's mobile phone through SIM.
- Multiple non-interfering panels can be installed in the same location to receive wireless firefighting equipment.

Installation

Technical Specification

Model	AW-FP032
Rated input voltage	100V-240VAC, 50Hz/60Hz
Standby battery	2000mAh 3.7V/ lithium battery
Working environment	Relative humidity (<95%) at -20 ~40 °C, no condensation)
Number of connected devices	20PCS
Viewing screen	0.96"ich
The number of mobile phones that can be sent to text	10
Alarm Horn	≥100dB@1m
Flashing frequency	1Hz
Wireless Working Frequency	433MHz (418MHz-448MHz)
Weight	About 1kg
Size	240mm*160mm*51mm
